Development Initiatives

aidinfo aims to increase the transparency of aid and other development resources. We believe that greater access to information about these resources will make aid more effective and accelerate poverty reduction. The aidinfo team works to promote progressive policy solutions and exploit innovative technology solutions to make this happen.

Since our 'aidinfo' initiative began in 2007, we've made major progress towards international aid transparency. Our success means that we are now seeking talented, rigorous, innovative individuals to join our existing team.
